

Swansea University  
Prifysgol Abertawe

# The Institute of Advanced Telecommunications (IAT)

Would like to invite you to attend our forthcoming lunch event:

## Future Developments of Mobile Broadband Tuesday 20th May 2008 11.00am

Digital Technium, Singleton Campus, Swansea University SA2 8PP

Our reliance on Telecommunications is greater than ever before, and the rate at which new technologies in the field are developing is increasing exponentially. But what are these technologies and **how are they relevant to business?** To be one step ahead register for this exciting and valuable event.

Guest Speakers:

### Glyn Roylance - Head of New Radio Technology **Orange**

Glyn's team at Orange has the responsibility for researching, trialing and assessing new mobile radio technologies. Glyn's adventure with Orange started 17 years ago with a small start-up called Microtel which grew and eventually became the mobile phone giant that we know today. During that time he has held responsibility for many aspects of the technical side of mobile radio networks from network planning and rollout to optimisation and 2G and 3G network and architecture design.

### Dave Tanner- Senior Consultant & Head of Mobile Practice, **Analysys Mason**

After working for Inmarsat and the Radio Communications Agency (now part of OFCOM) Dave joined Mason Communications in 2000. Providing a portfolio of consultancy services to address the ongoing business challenges faced by organisations throughout the telecoms value chain.

Following the presentations there will be a tour of our Demonstration Laboratory which will provide delegates with the opportunity to see the application of technologies within Telecommunications.

Lunch and networking opportunities will follow the tour.

This event is fully funded by the European Regional Delevelopment Fund.

Spaces are limited and advance booking is essential.
